

PSYC100 L: Introduction to Psychology

Fall 2027

Instructor

Jordan Lopez, M.D., Ph.D.
Professor of Psychology, Biological Sciences, Neurobiology & Biomedical Engineering
jlopez11@usc.edu
Office: Auditory Neuroscience Institute, Suite 500 (5th floor)
Office Hours: T/TH 11am & 7pm

Course Times & Locations

Component	Days & Times	Location
Lecture	Mon / Wed / Fri, 1:00 to 2:50 PM	NEU 500
Laboratory	Lab sections (begin Week 1): Tue 10am – 12:50pm Tue 1pm – 3:50pm Wed 9am – 11:50am Thu 10am – 12:50pm Thu 4pm – 6:50pm	 NEU LAB1A NEU LAB1A NEU LAB1A NEU LAB1A NEU LAB1A
Exams (4 total)	**Exams taken in Quiz Section Mondays at 5:00 PM Sep 20, Oct 18, Nov 8; Exam 4: Dec 8–15	 NEU 100A or NEU 100B

Course Description

Psychology is the scientific study of mind and behavior. PSYC100 L introduces the biological, cognitive, developmental, and social processes that shape human experience. Topics include sensation and perception, consciousness, learning and memory, language and decision-making, intelligence, motivation and emotion, development across the lifespan, personality, social behavior, psychological disorders, and treatment. Psychological concepts are examined through the experiments and observations that established them and the questions that continue to guide research.

The course emphasizes how psychological theories are developed, tested, and revised. Foundational experiments and contemporary research provide a framework for examining relationships among brain function, cognition, behavior, and the social and cultural environment. Students evaluate experimental designs, interpret behavioral data, distinguish causal evidence from correlation, and consider how sampling, measurement, and reproducibility affect scientific conclusions. Across topics, the goal is to explain psychological processes and assess the evidence supporting competing explanations.

This is the only PSYC100 offering that includes experimental laboratory sections in place of discussion sections. Laboratories begin in the first week and meet in their own scheduled sections, outside lecture hours. Students conduct behavioral experiments, formulate testable predictions, analyze data, and communicate findings in scientific reports. Lecture and laboratory together connect core psychological concepts with the methods used to investigate them, preparing students to evaluate psychological claims and pursue further study in psychology and related fields.

Prerequisites

Basic-level statistics is required for this offering of PSYC100. Students must satisfy the statistics prerequisite or receive a waiver before registering; students who have neither satisfied the prerequisite nor received a waiver will be unable to register. An approved equivalent may be recognized automatically, or the prerequisite may be waived automatically during course registration. Contact the instructor with questions about eligibility or to request consideration of a waiver. Students accessing this syllabus are presumed to have satisfied the statistics prerequisite or received an approved waiver. No previous psychology, neuroscience, programming, or advanced statistics knowledge is assumed; course-specific methods and analyses are introduced in lecture and laboratory.

Course Materials

Required textbook: Myers, D. G., DeWall, C. N., and Gruber, J. Psychology (14th ed.). Worth / Macmillan Learning. Assigned textbook readings and research articles are required course preparation. The textbook builds the conceptual foundation for lecture, while research articles allow us to examine specific experiments, current findings, and emerging questions. Lectures build on these readings and often extend beyond the textbook.

Lecture slides are the primary source of instruction, and exams are based on lecture content. Use the assigned readings to develop context, clarify unfamiliar concepts, and deepen your understanding of the evidence discussed in class. Slides provide a framework for lecture; they do not capture every explanation, example, or discussion that may appear on an exam.

Although this is an introductory course, it moves quickly and asks you to do more than memorize terminology. We cover substantial material and regularly work through experiments and data. No previous psychology background is expected, but consistent preparation is essential: complete assigned readings, attend lecture, review your notes regularly, and seek help early when something is unclear. The textbook, research articles, lectures, and labs are intended to support one another as you build these skills.

Required equipment: a laptop with a current browser and access to a spreadsheet or a free graphical analysis tool such as jamovi, plus a reliable connection to the course site. Task links, datasets, and analysis templates will be provided. No paid analysis software or prior coding experience is required. Contact the instructor or TA if equipment or accessibility is a concern. No paid courseware or access code is required for the laboratory activities.

Course Objectives

- Explain fundamental concepts across biological, cognitive, developmental, social, personality, and clinical psychology.
- Describe how experiments test explanations of perception, learning, memory, motivation, development, and behavior.
- Evaluate psychological evidence, interpret figures and results, and distinguish causation, correlation, and uncertainty.
- Compare foundational and contemporary findings, including how culture, sampling, and context affect generalization.
- Conduct a structured laboratory task, analyze authentic data, and communicate a defensible scientific conclusion.

Teaching Assistants

This course has no co-instructor. Questions about lab logistics, lab reports, and grading should go to your TA first. Email the instructor only for issues that the TA cannot resolve.

Role	Name	Email	Office Hours / Location
Lab TA (Section T/W)	Samuel Hires	hires@usc.edu	Mon, Fri; 4pm @ANI500A
Lab TA (Section TH)	David Mckemy	dkemy@usc.edu	Tues, Wed, Thurs; 3pm @ANI500A
Exam Proctor	Sarah W Bottjer	sbottjer@usc.edu	ANI 402

Grading

This course has two components, lecture and laboratory. Each is scored out of 100 percent. Your final grade is 50 percent lecture and 50 percent laboratory. **You must earn at least 60 percent in BOTH components to pass the course.** A strong lecture score does not rescue a failing lab score, and the reverse is also true.

Lecture Component (100%)

Assessment	Weight of Lecture Grade	Points
Exam 1 (Lectures 1 to 10)	20%	120
Exam 2 (Lectures 11 to 20)	20%	120
Exam 3 (Lectures 21 to 30)	20%	120
Exam 4 (Lectures 31 to 41)	20%	120
Lecture Project (data analysis or APA paper)	20%	120
Total	100%	600

Laboratory Component (100%)

Assessment	Weight of Lab Grade
Lab Reports (8 counted of 10, 7.5% each)	60%
Lab Attendance and Participation	10%
Methods Assignments (3 at 5% each)	15%
Mini-Replication Project	15%
Total	100%

Dr. J’s Grading Philosophy and Curve

Psychology requires you to explain behavior, interpret experimental evidence, and compare competing explanations. This is an introductory course, so unfamiliar terms, methods, and analyses are introduced step by step. Memorizing terminology alone is not sufficient; you must be able to explain a concept, describe what an experiment tested, and apply your understanding to unfamiliar results.

Exams and laboratory assignments reflect these expectations. Some assessments will be difficult, and raw percentages may be lower than you are accustomed to. Grades reflect demonstrated understanding, scientific accuracy, and the quality of your reasoning. Consistent effort and participation are important, but they do not substitute for meeting the course’s academic standards.

If the final class average, calculated using the weighted lecture and laboratory grades before curving, is below 70%, a curve will be applied at the end of the course. If the class average is 70% or higher, no curve will be applied. The size of any adjustment will depend on overall class performance. A curve accounts for assessment difficulty while maintaining expectations for mastery; it does not guarantee a particular letter grade or a passing grade. Use early assessment results to identify gaps in your understanding, review feedback, and seek help promptly. Do not rely on a possible curve to compensate for missing work or consistently weak performance. You must still earn at least 60% in both the lecture and laboratory components to pass the course.

Grading Scale After Curving (changes year to year)

The percentage ranges below are approximate estimates, not fixed or guaranteed cutoffs. The grading scale may change from year to year, and final cutoffs for this semester may differ based on overall class performance and any curve applied under the policy above. Use this table as a general guide when estimating your grade.

Letter Grade	Approximate Percentage Range
A	90-100%
A-	85-89.9%
B+	80-84.9%
B	75-79.9%
B-	70-74.9%
C+	65-69.9%
C	60-64.9%
C-	55-59.9%
D	45-54.9%
F	Below 45%

Final grades are not rounded up. Letter grades will be assigned strictly according to the finalized cutoffs, which will be announced before final grades are assigned. Regardless of any adjustment to the scale, you must earn at least 60% in both the lecture and laboratory components to pass the course.

Exams

There are four exams, each worth 120 points. Exam 1 covers Lectures 1 to 10, Exam 2 covers Lectures 11 to 20, Exam 3 covers Lectures 21 to 30, and Exam 4 covers Lectures 31 to 41. Exams are not cumulative, but the concepts build on one another. Planned dates are Monday, September 20; Monday, October 18; and Monday, November 8. Exam 4 will use the assigned university appointment within December 8–15. All exams use the separate exam session. Exams 1–3 meet Mondays at 5:00 PM in NEU 100A or NEU 100B. Exam 4's assigned date and time will be announced separately. Dates and room reservations remain subject to departmental confirmation.

- **Number of questions and versions:** Expect 40 questions totaling 120 points: 10 multiple-choice items at 2 points each, 20 fill-in or brief-answer items at 2 points each, and 10 short-response or data-interpretation items at 6 points each. The final timing will be checked against the assigned exam-session length. Exams may use three versions (V1, V2, and V3), with question and answer order mixed within each lecture section.
- **Question order:** Exam questions are ordered by lecture. Questions on Lecture 1 come first, followed by questions on Lecture 2, and so on through the last lecture covered by that exam.
- **Room and version assignment:** Your assigned exam room and version will be posted on the course site before each exam. Attend the assigned room unless the instructor approves a change. Approved accommodations are implemented through the university process.
- **Exam format:** In-person paper exams consisting primarily of written free-response and fill-in-the-blank questions, with a smaller number of multiple-choice questions. Questions may require definitions in context, explanations of findings, interpretation of figures and data, or evaluation of an experimental design. Approximately 40% of points address concepts directly and 60% address studies or experimental reasoning.
- **Expectations for answers:** Draw directly from lecture content, explain specific experiments and findings, and identify the evidence supporting your answer. Use relevant examples of psychological processes and

behavior. Memorizing terminology or repeating slide text without demonstrating understanding is not sufficient.

- **Missed exams:** Make-up exams are not given. If you miss one exam, a zero will initially be recorded. If the absence is approved for a valid, documented medical or official reason, that zero will be replaced at the end of the semester by the average of your other three exam scores. This replacement uses your other exam scores, not your final course grade. An undocumented or unapproved absence will remain a zero. Approved accommodations, religious observance, and university-required alternatives take precedence.
- Bring a photo ID and a pencil (YOU WILL BE VERIFIED). Phones, smartwatches, and notes are not allowed
- **Exams are closed-note** unless the class negotiates an alternative at the beginning of the semester (and/or before Exam I). The class may negotiate permission to bring **one 8.5 × 11-inch handwritten reference sheet (double sided, OK). In exchange, the class agrees to replace the multiple-choice questions with additional fill in the blank questions (any change needs to be negotiated with the class as a whole)**. Reference sheets must be handwritten; typed or printed material is not permitted.

New lecture content is introduced on exam days. Exams occur in the separate exam session, so the regular 1:00–2:50 PM lecture meets normally. Material introduced after an exam's coverage block is assessed on the next relevant exam.

Lecture Project (20% of Lecture Grade)

Each student completes one Psychological Evidence Project based on a focused question covered in class. Choose ONE option. Your choice is due with your proposal. Both routes are individual work and are worth 120 points.

Option A: Data Analysis Project

Use an instructor-approved, deidentified public or provided dataset to examine a psychological question. State a prediction, reproduce a meaningful comparison, create an accurately labeled figure from the actual data, and interpret the finding. Submit the editable analysis file, a 4–6-page APA-style report, and a 5-minute recorded explanation. Include at least 4 primary studies, at least 2 published from 2000 onward and at least 1 from 2020 onward. Use a spreadsheet, jamovi, or an equivalent tool; advanced coding is not required. Do not collect new participant data for this project.

Option B: Psychological Evidence Paper

Write a 4–6-page paper in APA 7th edition format, excluding title page, figures, and references, on a focused psychological claim. Compare at least 5 primary research articles, at least 3 published from 2000 onward and at least 1 from 2020 onward. Explain what researchers did and found, assess agreements and disagreements, and propose a feasible follow-up experiment. Submit a 5-minute recorded explanation. Unrelated summaries of individual papers are insufficient. Both options use the same 120-point rubric: concepts/question 20, primary evidence 35, analysis/synthesis 30, source verification and methods 20, and communication 15.

Project Milestones

Milestone	Due
Proposal: chosen option, focused question, initial references, and dataset if applicable (1 page)	Fri Sep 24, 11:59 PM
Progress check: argument outline or preliminary analysis, figure, and source list	Fri Oct 22, 11:59 PM
Final report, editable analysis if applicable, and recorded explanation	Fri Nov 19, 11:59 PM

Laboratory Component

The lab is a required, graded component and begins in Week 1, August 23–27. The first session includes a reaction-time experiment, with brief instruction in ethical participation and data handling. Labs use low-risk behavioral tasks and approved deidentified data. Personal participation as a research subject is voluntary; an equivalent analysis route is available without penalty. No task requires personal clinical disclosure, diagnostic testing of classmates, sleep deprivation, aversive stimulation, or outside recruitment. Use coded data on the approved course system. Classroom activities are not automatically approved for external human-subjects research.

- **Lab Reports (10 labs, lowest 2 dropped, 7.5% each for the 8 counted).** Lab 1 uses a guided 2–3-page report; later reports are normally 3–4 pages, excluding figures and references. Use Question and Prediction, Methods, Results, Discussion, and References. Submit a labeled authentic-data figure and an editable analysis file. Apply the comparison taught for the task rather than adding an unjustified significance test to every claim. Each report is scored out of 100: question 15, methods 20, analysis/figure 30, interpretation 25, clarity/references 10.
- **Lab Attendance and Participation (10%).** Attend each scheduled lab or an approved equivalent. Submit the session's data/checkpoint and exit response before leaving, or within the equivalent task's posted window. Each of 13 required meetings earns 2 points: 1 for attendance/equivalent participation and 1 for the completed checkpoint. The participation percentage is points earned divided by 26, multiplied by 100. Notify the TA promptly about an absence and arrange a make-up or equivalent. The two dropped reports do not automatically excuse attendance.
- **Methods Assignments (3 assignments, 5% each, 15% total).** Assignment 1, due September 10, teaches cleaning a reaction-time file, condition summaries, and an accurate figure. Assignment 2, due October 1, asks you to design an ethical, controlled experiment and identify a confound. Assignment 3, due October 29, compares study results, uncertainty, and generalization. Submit the editable analysis and a 1–2-page interpretation or design, as specified in the prompt. Use free graphical tools or a spreadsheet; coding is optional.
- **Mini-Replication Project (15%).** Teams of 3–4 select an approved neutral task already introduced in lab. Before collecting data or inspecting the outcome, submit a one-page prediction, design, exclusion rule, and analysis plan by November 5. A data checkpoint is due November 19. Submit a shared poster and editable analysis plus an individual 2–3-page interpretation by December 3. Present for 5 minutes in your assigned Week 15 lab section. Do not submit the lecture project again as the lab project. Team design, analysis, and poster account for 60 points; individual interpretation and contribution account for 40.
- **Participation and access:** The project may use an approved classroom task or an approved public-data reanalysis. No outside recruitment is authorized. A student's grade depends on reasoning and analysis, not a particular psychological score or agreement to supply personal data. Report authentic results even when they are inconclusive; do not fabricate findings or citations.

Lab Schedule and Due Dates

Lab	Week	Topic	Due / Notes
Lab 1	Week 1	Reaction time and the speed–accuracy trade-off	Report due Sun Sep 5
Lab 2	Week 2	Psychophysics: detection and response criterion	Report due Sun Sep 12
Lab 3	Week 3	Selective attention and Stroop interference	Report due Sun Sep 19
Lab 4	Week 4	Learning and reversal of action–outcome contingencies	Report due Sun Sep 26
Lab 5	Week 5	Working-memory load and distraction	Report due Sun Oct 3
Lab 6	Week 6	Memory reconstruction and source monitoring	Report due Sun Oct 17; extra time around Fall Recess
Lab 7	Week 8	Framing and risky decisions	Report due Sun Oct 24
Lab 8	Week 9	Infant cognition through looking-time data	Report due Sun Oct 31

Lab	Week	Topic	Due / Notes
Lab 9	Week 10	Personality measurement and the role of situations	Report due Sun Nov 7
Lab 10	Week 12	Cooperation, social norms, and group decisions	Report due Sun Nov 21; Thursday sections use an equivalent Nov 8–10 or 12
Project clinic	Week 11	Mini-replication design and approved make-up work	Proposal due Fri Nov 5
Project data	Week 13	Mini-replication data session and make-up support	Checkpoint due Fri Nov 19
Project presentations	Week 15	Mini-replication presentations in the assigned LAB section	Final due Fri Dec 3
Methods Assignment 1	Fri Sep 10	From responses to evidence	Due 11:59 PM
Methods Assignment 2	Fri Oct 1	Design a fair psychological experiment	Due 11:59 PM
Methods Assignment 3	Fri Oct 29	Replication, uncertainty, and generalization	Due 11:59 PM

Lab sections meet at the times listed under Course Times & Locations; all sections meet in NEU LAB1A. All report and assignment deadlines are 11:59 PM Pacific time. No required regular lab meets in Week 7 or Week 14. Fall Recess is October 7–8, Veterans Day is November 11, and Thanksgiving is November 24–28. Holiday-affected sections receive an equivalent task without required participation on a closure day. The late work policy applies (see Late Work below).

Lecture Recordings and Study Materials

Lectures are recorded. Recordings are released **one week before the exam that covers them**. I may release them two weeks before an exam at my discretion, but early release is not guaranteed and should not be expected. You are responsible for attending lecture, taking thorough notes, and studying throughout the semester. **Do not wait for recordings to begin preparing for an exam.**

Recordings from previous offerings may also be posted as supplemental study materials. This course changes between semesters, and older recordings may omit current topics or include material that is no longer covered. **This semester's lectures determine what is examinable.** You are responsible for identifying those differences using the current lectures and slides.

Recordings do not replace attendance or excuse arriving unprepared. Lecture content is dense and requires consistent engagement. Choosing to rely on recordings does not reduce the material you are expected to know or change the standards by which your work will be graded.

Study Expectations

This course covers substantial material on a fast schedule. Plan at least two hours of outside study for every hour of class. Review each lecture within 48 hours. Practice retrieving concepts, explaining experiments, and interpreting figures rather than only rereading. Form study groups but make sure each person can answer exam questions alone. Start reports while the procedure is fresh and begin the project well before its deadline.

Lecture & Lab Attendance

Attendance at all lectures and labs is expected. Lectures introduce material that is not on the slides, and that material will appear on exams. There is no grade for lecture attendance, but missing lectures will affect your exam performance. Lab attendance is graded, and lab absences will not be excused without documentation.

Late Work

- Lab reports, methods assignments, and the Mini-Replication Project: 5% deduction from the available points per calendar day late for the first 7 days. Work more than 1 week late is not accepted without an approved extension.

- **Lab participation:** observations, data, and the checkpoint must be submitted through the course site before leaving the lab, or by the approved equivalent task deadline. Submissions outside that window do not earn checkpoint credit without an approved extension.
- **Lecture project:** 30% deduction for any submission after 11:59 PM on the due date. Projects submitted more than 48 hours late are not accepted.

Extensions require instructor approval. Contact me before the deadline when possible, or as soon as reasonably possible in an emergency. Approved accommodations, religious observance, and university-required arrangements take precedence over ordinary late penalties.

Academic Integrity and Use of AI Tools

Follow the university's standards of academic integrity. Cheating, plagiarism, unauthorized collaboration, fabricated data or citations, and unauthorized exam materials are handled under university procedures. Generative AI may not write lab report prose, the lecture-project paper, individual mini-replication interpretations, or exam answers. Coding or software-troubleshooting assistance is permitted only when authorized and disclosed; verify all output and retain the original files. Team collection and analysis are allowed only for the specified team components. Do not upload classmates' data to external AI services.

Accommodations

Students seeking accommodations should contact the Office of Student Accessibility Services as early as possible. Provide the approved notice through the university process and coordinate lecture, lab, software, deadline, and exam arrangements with the instructor. Early notice supports planning; a course deadline does not cancel an approved accommodation. OSAS: https://osas.usc.edu/.

Communication

Questions about psychological concepts, experiments, and data analysis are expected. Use Teaching Assistants as the first point of contact for homework, lab reports, analysis, and routine logistics. TAs hold lab sessions and office hours and can provide timely support. Contact the instructor at jlopez11@usc.edu for unresolved questions, grading concerns, accommodations, or confidential issues. No student is required to disclose personal mental-health experiences during class or lab.

I will make every effort to respond to emails and messages promptly; however, because I teach multiple courses and run an active research laboratory, response times may be delayed. Students should generally expect responses within one business day. Messages sent in the evening, overnight, or on weekends will typically be addressed the following business day. Use clear subject lines that include the course number and topic, such as "PSYC100 L: Lab 3 report question." Keep questions concise and include relevant context, such as the assignment name or lab section. Reach out early rather than waiting until deadlines or exam days. Consult the syllabus and current lecture materials for exam coverage before emailing.

Absences and Communication

I understand that many students balance academic responsibilities with work, family obligations, and other commitments. If you anticipate an absence or experience an emergency, contact me as soon as possible. For lab absences, notify your TA promptly and arrange the appropriate documentation, make-up, or equivalent task. Communicating early helps us find an appropriate arrangement.

Unexcused lab absences will affect your Lab Attendance and Participation grade under the laboratory attendance policy, regardless of access to lecture recordings. There is no separate lecture attendance grade, but you remain responsible for all missed lecture content. Recordings are provided as a supplement and do not replace in-person participation. Missed exams remain subject to the missed-exam policy.

Course Calendar

Lectures meet Monday, Wednesday, and Friday, 1:00–2:50 PM. Every instructional meeting introduces a new topic, beginning August 23 and ending December 3. Exams use the separate session; planned dates are September 20, October 18, and November 8, with Exam 4 in the assigned December 8–15 appointment. Exams 1–3 meet at 5:00 PM in NEU 100A or NEU 100B; Exam 4's assigned date and time will be announced separately. Lab weeks and deadlines appear above and below. University holidays follow USC's Fall 2027 academic calendar (https://academics.usc.edu/calendar/).

Date (2027)	Session	Topic	Assessment / Notes
Week 1	Lab 1	Reaction time and the speed–accuracy trade-off	Meets Aug 23–27; report due Sun Sep 5
Mon Aug 23	Lecture 1	Perception, illusions, and the mind's predictions	
Wed Aug 25	Lecture 2	Experiments, causality, and psychological evidence	
Fri Aug 27	Lecture 3	Neurons, networks, and the biology of behavior	
Week 2	Lab 2	Psychophysics: detection and response criterion	Meets Aug 30–Sep 3; report due Sun Sep 12
Mon Aug 30	Lecture 4	Brain damage, plasticity, and the divided mind	
Wed Sep 1	Lecture 5	Genes, experience, and human differences	
Fri Sep 3	Lecture 6	Seeing, hearing, and detecting weak signals	
Sun Sep 5	Report due	Lab 1 report	Due 11:59 PM
Mon Sep 6	Holiday	Labor Day Holiday	No class or labs
Week 3	Lab 3	Selective attention and Stroop interference	Meets Sep 7–10; report due Sun Sep 19
Wed Sep 8	Lecture 7	Attention, distraction, and failures of awareness	
Fri Sep 10	Lecture 8	Consciousness, unconscious processing, and agency	Methods Assignment 1 due
Sun Sep 12	Report due	Lab 2 report	Due 11:59 PM
Week 4	Lab 4	Learning and reversal of action–outcome contingencies	Meets Sep 13–17; report due Sun Sep 26
Mon Sep 13	Lecture 9	Sleep, dreaming, and biological clocks	
Wed Sep 15	Lecture 10	Drugs, reward, and addiction	
Fri Sep 17	Lecture 11	Classical conditioning: learning predictive relationships	
Sun Sep 19	Report due	Lab 3 report	Due 11:59 PM
Week 5	Lab 5	Working-memory load and distraction	Meets Sep 20–24; report due Sun Oct 3
Mon Sep 20	EXAM 1	Lectures 1 to 10	Separate exam session; regular lecture also meets
Mon Sep 20	Lecture 12	Operant conditioning: actions and consequences	
Wed Sep 22	Lecture 13	Observational learning and cultural transmission	
Fri Sep 24	Lecture 14	Working memory, amnesia, and memory systems	Lecture project proposal due
Sun Sep 26	Report due	Lab 4 report	Due 11:59 PM
Week 6	Lab 6	Memory reconstruction and source monitoring	Meets Sep 27–Oct 1; report due Sun Oct 17
Mon Sep 27	Lecture 15	False memories and eyewitness identification	
Wed Sep 29	Lecture 16	Retrieval, forgetting, and durable learning	
Fri Oct 1	Lecture 17	Language: acquisition, comprehension, and the brain	Methods Assignment 2 due
Sun Oct 3	Report due	Lab 5 report	Due 11:59 PM

Date (2027)	Session	Topic	Assessment / Notes
Week 7	Laboratory	Analysis support before Fall Recess	No required regular lab this week
Mon Oct 4	Lecture 18	Judgment, risk, and decision-making	
Wed Oct 6	Lecture 19	Intelligence: measurement, development, and fairness	
Fri Oct 8	Holiday	Fall Recess: October 7–8	No class or labs
Week 8	Lab 7	Framing and risky decisions	Meets Oct 11–15; report due Sun Oct 24
Mon Oct 11	Lecture 20	Motivation: hunger, goals, and self-control	
Wed Oct 13	Lecture 21	Emotion: bodily responses, appraisal, and regulation	
Fri Oct 15	Lecture 22	Stress, health, and the social environment	
Sun Oct 17	Report due	Lab 6 report	Due 11:59 PM
Week 9	Lab 8	Infant cognition through looking-time data	Meets Oct 18–22; report due Sun Oct 31
Mon Oct 18	EXAM 2	Lectures 11 to 20	Separate exam session; regular lecture also meets
Mon Oct 18	Lecture 23	Infant cognition and the developing mind	
Wed Oct 20	Lecture 24	Attachment, caregiving, and social development	
Fri Oct 22	Lecture 25	Adolescence: identity, peers, and risk	Lecture project progress due
Sun Oct 24	Report due	Lab 7 report	Due 11:59 PM
Week 10	Lab 9	Personality measurement and the role of situations	Meets Oct 25–29; report due Sun Nov 7
Mon Oct 25	Lecture 26	Adulthood, aging, and cognitive change	
Wed Oct 27	Lecture 27	Personality: traits, situations, and the self	
Fri Oct 29	Lecture 28	Sex, gender, and sexual behavior	Methods Assignment 3 due
Sun Oct 31	Report due	Lab 8 report	Due 11:59 PM
Week 11	Laboratory	Mini-replication design clinic and make-up work	Proposal due Fri Nov 5
Mon Nov 1	Lecture 29	Social perception, attribution, and first impressions	
Wed Nov 3	Lecture 30	Conformity, obedience, and social power	
Fri Nov 5	Lecture 31	Prejudice, discrimination, and intergroup behavior	Lab-project proposal due
Sun Nov 7	Report due	Lab 9 report	Due 11:59 PM
Week 12	Lab 10	Cooperation, social norms, and group decisions	Meets Nov 8–12; report due Sun Nov 21
Mon Nov 8	EXAM 3	Lectures 21 to 30	Separate exam session; regular lecture also meets
Mon Nov 8	Lecture 32	Cooperation, helping, and collective action	
Wed Nov 10	Lecture 33	Relationships, belonging, and loneliness	
Thu Nov 11	Holiday	Veterans Day Holiday (Thursday)	No class or labs
Fri Nov 12	Lecture 34	Culture, work, and behavior in organizations	
Week 13	Laboratory	Mini-replication data session and make-up work	Checkpoint due Fri Nov 19
Mon Nov 15	Lecture 35	Psychological disorders, assessment, and neurodevelopment	
Wed Nov 17	Lecture 36	Anxiety, trauma, and obsessive-compulsive disorders	
Fri Nov 19	Lecture 37	Mood disorders: depression and bipolar disorder	Lecture project final and lab-project checkpoint due
Sun Nov 21	Report due	Lab 10 report	Due 11:59 PM
Week 14	Laboratory	Thanksgiving week	No required regular lab this week

Date (2027)	Session	Topic	Assessment / Notes
Mon Nov 22	Lecture 38	Schizophrenia and psychosis	
Wed Nov 24	Holiday	Thanksgiving Holiday: November 24–28	No class or labs
Week 15	Laboratory	Mini-replication presentations in LAB sections	Final due Fri Dec 3; lectures meet normally
Mon Nov 29	Lecture 39	Dissociative, personality, and eating disorders	
Wed Dec 1	Lecture 40	Treatments: psychotherapy, medication, and prevention	
Fri Dec 3	Lecture 41	Psychology in the digital world: persuasion, misinformation, and AI	Lab-project final due
Dec 4–7	Study Days	University study period	No regular lectures or labs
Dec 8–15	EXAM 4	Lectures 31 to 41	Assigned date/time: _____

Readings Calendar

Assigned textbook readings and research articles are required course preparation. The dated reading schedule and article list will be posted on the course site. Complete each assigned reading before the corresponding lecture. Current lecture content defines exam coverage.

Final Word

This course asks you to think like a psychological scientist: explain a behavior, examine the experiment, and decide what the evidence supports. If you show up to lecture and lab, review the material regularly, and start early, you will leave with a working understanding of how people perceive, learn, remember, develop, and interact. Be prepared to question an explanation, work carefully with data, and revise a conclusion when the evidence changes.
